

PrimulaDigital is a Startup Company focused on DevOps based in **TechBase** in Regensburg. With our services and backend components we are helping our German and international clients to manage their cloud infrastructure more efficiently and effectively.

To reinforce our team in **Regensburg** we are looking for people who, like us, are focused on automation, reproducibility and reliability.

DevOps Engineer (m/w/d)

After an onboarding and training period, you will support directly one of our clients.

Responsibilities

- Analyze, consolidate and document Cloud Infrastructures based on AWS, Google Cloud Platform and Azure
- Design and implement cloud IT architecture for customer solutions
- Operate, maintain and monitor the cloud environments of our clients
- Design and implement monitoring concepts
- Define and implement system metrics for performance tracking for the production system

Qualifications

You must provide some of the listed qualification and be ready to obtain the others when requested.

- Linux knowledge (preferably Ubuntu)
- Scripting: Python, Perl, bash
- JavaScript, Node.js, express.js
- Applications containers management: Kubernetes, Docker
- Automation tools: Puppet, Ansible, Salt, Jenkins
- Cloud infrastructure: AWS, Google Cloud Platform, Azure
- Implementation and administration of CI/CD Pipelines, proficiency with build tools and git
- Log aggregation and analytic gathering (Kibana, Grafana)
- Fluent in English and German

We offer

- Working with advanced technology and tools
- Fast execution on good ideas
- Training opportunities and support in certifications programs (i.e. AWS)
- Stimulating working environment
- Competitive salary package
